Subject: Successful Completion of Intel Waste Treatment Reclaim (WATR)  
Ronler Acres Campus Site 5 – Hillsboro, OR  
Structural Slurry Wall - Design Build of POTW, Drain, IWW Pump Stations  
Letter of Recommendation

Dear Ihab;

On behalf of MWH and the project team, I want to commend you on the successful completion of the Structural Slurry Wall for the three (3) pump stations at the Intel Ronler Acres Waste Treatment Reclaim (WATR) project. MDCI value engineering to construct the pump stations, by means of structural slurry wall contributed to the project success, due to MDCI technical expertise and cooperation the value engineering of the structural slurry wall reduced the overall project cost and reduced the overall project schedule, it was a great success.

Special accolades goes to the onsite team that you put together to oversee the project and maintaining the highest quality standards.

Finally, I want to thank MDCI management for their personal commitment to the project. It is not too often that projects are afforded the personal involvement of the principals of the company.

The project partnership that was established validated that working together does indeed work. MWH and Malcolm will continue to work together in the near future and I am confident we will have the same results.

If anyone has any further questions, please don't hesitate to call or email.

Thank You,

Casey Graham  
General Superintendent  
RA WATR Project
