RE: Malcolm Drilling Company, Inc. Letter of Recommendation

To Whom It May Concern,

Based on successful experiences with Malcolm Drilling Company, Inc. (MDCI) on Sofi Stadium and the Hollywood Park Performance Venue project, we highly recommend MDCI for future deep foundation and pile foundation work. The Turner AECOM Hunt NFL JV (THJV) team had a collaborative and positive experience with the MDCI team, working closely and effectively with Kyle Sansing, Nathan Tourtellotte, Gary Sanangelo, and Brock Nieuwkoop. Not only was MDCI professional and courteous, they were very responsive and reasonable while working with us on these extremely complicated landmark projects.

The scope that MDCI completed included 700 Stadium bowl piles, 24 Roof canopy foundation piles, and 14 Performance Venue foundation piles. The piles were a mix of CFA and CIDH piles in a sandy silty soil, ranging from 50 to 120 feet deep. MDCI was able to scale up their operation and reduce the original 15-week duration down to 9 weeks for the initial 700 piles and completed all CIDH piles for the Roof canopy and Performance Venue project on schedule. MDCI provided all necessary pile driving equipment and tools in building the foundation for a successful project.

The MDCI personnel were great to work with by maintaining a great attitude and working relationship with our team from the beginning. Their General Superintendent, Gary Sanangelo has a positive and service-oriented attitude, and always looked for solutions with the team through interactive on-site evaluations of potential situations prior to start of work. Their PM and Executive team has been exceptionally accommodating while dealing with the myriad of changes and surprises from the ever-changing design and provided fair and reasonable numbers when resolving change order costs. For the Stadium project, MDCI was accommodating to the Design Team's test pile program, which was implemented as construction started. MDCI was able to shorten and speed up pile installation as the Design Team was able to reduce the pile depths based on test pile results after the first 25% of pile were completed.

Please consider Malcolm Drilling Company, Inc. when selecting the deep foundation contractor. Based on our positive experience at the Sofi Stadium and PV project, we highly recommend them and will most definitely consider them again in our future endeavors.
